Art Unit: 2821

DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: "A radio wave absorption belt 1439" in [0101] failed to show in Figure. 15. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract is objected to because it is not in narrative form and generally limited to a **single paragraph** on a separate sheet within the range of 50 to 150 words.

Correction is required.

Art Unit: 2821

Claim Rejections - 35 USC § 112

Page 3

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Lines 3-6 of claim 1 fail to positively recite a multi-layer structure that includes a plurality of 1st and 2nd conductive layers. As stated, the multilayer structure merely includes 2 layers namely the 1st and the 2nd. This structure prevents stacking the layers in the manner subsequently described in lines 7-14.

Claims 2-7 are rejected because they depend on claim 1.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35U.S.C. 102 that form the basis for the rejections under this section made in thisOffice action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 6. Claims 1, 4, and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Ramasamy (US 20040125018).

Art Unit: 2821

(Claim 1)

Ramasamy discloses multilayer structural conductive layers (fig. 18) including a first conductive plane connected to power supply potential (76-1₁) and a second conductive plane connected to ground potential (76-1₂), wherein, said first and second conductive planes are formed such that one conductive plane interposes between the other conductive plane and a surface of a printed circuit board (76) on a side where a wireless communication board is mounted (10₂₈), and an electric field generated by a potential difference between said power supply potential (76-1₁) and said ground potential (76-1₂); is concentrated on a side of said the other conductive plane rather than a side of said one conductive plane.

(Claim 4)

Ramasamy discloses the other conductive plane being formed in a smaller size than said one conductive plane, and located within an area of said one conductive plane (Fig 29-31).

(Claim 6)

Ramasamy further discloses a chassis that houses said printed circuit board (Fig. 14 – 16).

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which

Art Unit: 2821

said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

8. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ramasamy in view of Ito (6,469,670).

Ramsamy teaches all of the elements, except the radio wave absorption member. Ito discloses a radio wave absorption member (col1 lines 36-37) that is located inside said chassis (Fig. 4), and absorbs an electric field generated by a potential difference between said power supply potential and said ground potential. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Ramasamy's communication device with the absorption member as taught by Ito in order to reduce the absorption.

Allowable Subject Matter

- 9. Claims 2-3 and 5 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 10. The following is a statement of reasons for the indication of allowable subject matter:

The cited art of record fails to teach the circuit board comprising a conductive belt with slits interposing between the conductive belt and the other

Art Unit: 2821

conductive plane as defined in claims 2 and 5, or a U-shaped conductive member as defined in claim 3.

Inquiry

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Binh V. Ho whose telephone number is 571 272 8583. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Don K. Wong can be reached on 571 272 1834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
